Design of Magnetic Components - W5JGV

Magnetic Components Design and Applications is intended primarily for the circuit designer and the power processing systems designer who have found that in order to be more effective they must learn not only to use, but to design their own magnetic components.

Planar Magnetic Design ... design in Point of Load (POL) application. It takes into account the effect of non-sinusoidal voltage waveforms, low duty ratios and high frequency, and how these effect the optimization of the inductor design. This paper focuses on a ... procedure was devised to design magnetic T components for POL applications like ...

established design with which they are more familiar even though the design may not be optimum for the application. This is done because of good results from past designs and a good handle cm the design procedure for the power magnetic components. The conversion process in power electronics requires the use of magnetic components which are

Evaluation of Magnetic Materials for Very High Frequency Power Applications Yehui Han An Li Grace Cheung ... applications in the 10 MHz to 100 MHz range. A measurement ... this paper are thus useful for design of magnetic components for very high frequency applications.

Evaluation of Magnetic Materials for Very High Frequency

Low Loss 67 Material for High Frequency Power Applications The development of high frequency switching power converters has driven the need for low loss magnetic materials. Due to the lack of material performance data, the design of power magnetic components for high frequency operation (2-20 MHz) has been difficult to achieve.
